Education

University of Nottingham, UK

Sep 2026 - Jun 2028 (expected)

BSc Computer Science with Artificial Intelligence (2+2), Jubilee Campus.

University of Nottingham Ningbo China

2024 - 2026

First two years of the 2+2 program; GPA: 4.0/4.0 (Top 10%).

Dean's Scholarship: 2025 - 2026. IELTS: 7.5.

Profile

Computer Science and AI student with hands-on Java, Python and Go development, AI prototyping and system integration experience. Interested in applying modular design, reliable state handling and model evaluation to games, AI opponents and user-facing reporting applications.

Relevant Experience

China Telecom Fufu Information Technology Co., Ltd.

Jul 2026 - Aug 2026

AI Intern | Big Data Applications Division / Data Elements Division

Factory safety AI assistant and AI workflows

- Independently built a Python/Streamlit safety-analysis demo combining rules, RAG and DeepSeek to identify hazards, cite regulations and prioritize corrective actions; used ChromaDB and SQLite for retrieval and traceable task history.
- Separated analysis services from the UI and handled retrieval and task failures. Built a LangGraph plan-and-execute agent prototype with tool routing and state management.

Healthcare portal backend

- Developed Java/Spring Boot REST APIs for homepage configuration, business metrics and news; implemented MyBatis/MySQL data aggregation, Nacos configuration and error handling.
- Clarified database and gateway dependencies with frontend and deployment colleagues and prepared integration and release documentation, supporting coordinated delivery within an existing microservice system.

Hyperledger Fabric platform and Go chaincode

- Fixed record-ordering and input-validation defects in Go chaincode; added regression coverage while preserving existing API and ledger compatibility.
- Rebuilt the local platform with WSL/Linux and Docker Compose and automated startup and end-to-end checks, strengthening reproducible integration and verification.

Academic Project

Image Classification System | 2025

- Built a modular PyTorch/ResNet18 transfer-learning pipeline for preprocessing, training and evaluation; applied data augmentation and compared optimizers through repeatable experiments.
- Containerized a Flask REST inference service with Docker, separating model execution from the application interface for reproducible deployment.

Technical Skills

Programming: Java, Python, Go, C/C++, SQL, Shell, MATLAB.

AI & data: PyTorch, model evaluation, LangGraph/LangChain, RAG, ChromaDB, Pandas, SQLite.

Backend & interfaces: Spring Boot, REST APIs, MyBatis-Plus, MySQL, Nacos, Flask, Streamlit.

Engineering: Git, Docker Compose, WSL/Linux, JUnit, Go testing, regression testing, integration documentation, Hyperledger Fabric.
