Project Background Information	
The aim of the project is to create a social hub app for university students to find and organise things to do. Users can create events or activities and post them on a shared board. Other users can browse or filter activities by things like location, date, cost or type, and register their interest in joining. The app could also highlight local offers or opportunities. For example, a nearby axe-throwing venue might offer 50% off for groups of five or more, and a student could post the offer so others can join and make up a group. The project is open-ended, and students can explore additional features that make it easier and more enjoyable for people to discover activities and meet others.	

¹ An overview of different research areas in the school of computer science can be found [here](#).

Requirements	
<i>The group must provide:</i> • A working prototype of the social hub as a web or mobile application. • The ability for users to create and browse events or activities. • Search and filtering so users can find activities based on things like location, date, cost or category. • The ability for users to register their interest in an activity and see how many people are interested. • A simple way for users to manage their own events and activities. • Appropriate consideration of security, privacy, accessibility and usability. • Basic documentation explaining the design, architecture, development and testing of the solution. • A final demonstration of the completed MVP/POC. Students are encouraged to suggest and develop additional features that could improve the experience, such as notifications, recommendations, maps, chat, or integration with local offers and events.	
Skills	
<i>Highly desirable: Software engineering and software development, web/mobile application development, database design, API development and integration, version control and collaborative development.</i>	<i>Desirable: Artificial intelligence or recommendation systems, geolocation/mapping technologies, UX/UI design</i>
Submission / Award information	
<i>Date of Submission:</i>	September 2026
<i>Date of Pitch:</i>	October 2026
<i>Notification of award:</i>	October 2026

For further information on this proposal, the team representative should in the first instance e-mail the lead contact stated above at the e-mail address provided.
