<i>Students must sign NDA:</i>	No
<i>Project uses personal data:</i>	No
<i>Custom hardware required:</i>	No If Applicable: N/A
<i>Relevant research areas (if applicable)¹:</i>	N/A

Project Background Information

UNiDAYS is a part of the university experience for tens of millions of students worldwide. We're best known for helping students save money on their purchases. Our mission is simple - to make every student experience more valuable and rewarding.

Moving to university can feel like a crash course in spinning plates: maintaining a social life, keeping grades up, all while making a student loan stretch to the end of the year.

We'd like you to make a fun minigame to promote the ways that UNiDAYS can help students make the most of their student life. Think "The Sims" but the only way you can survive is by using UNiDAYS.

¹ An overview of different research areas in the school of computer science can be found [here](#).

Requirements	
<i>The group must provide:</i> By the end of the project the group should have developed a browser-based student life simulation game where players manage their grades, money, social life (and any other stats you think are important) across a university year. The aim is to make it until the end of the year without running out of money or failing their exams. Requirements: • Resource management - players must balance multiple stats, e.g. bank balance, grades, social life, that change based on their choices. • Dynamic scenarios - players face a variety of relatable student dilemmas, e.g. a flatmate's birthday night out vs an exam tomorrow, that impact these metrics. • UNiDAYS Integration - players must be able to use an in-game phone to access simulated UNiDAYS discounts to reduce the financial impact of their choices, demonstrating how the platform helps make student life more affordable. Key considerations: • Game Balancing & Mechanics - designing the games logic so it feels fair, rewarding, and challenging, but most importantly fun. • Content - how to make the content for the scenarios feel fresh, unpredictable, and non-repetitive across multiple playthroughs. • Responsive design - the game should be playable across a variety of different devices, from phones to desktops.	
Skills	
<i>Highly desirable:</i> • Game development experience, or a desire to learn	<i>Desirable:</i> • <i>Communication and collaboration</i> • <i>Strong interest in Design (UI/UX)</i>
Submission / Award information	
<i>Date of Submission:</i>	September 2026
<i>Date of Pitch:</i>	October 2026
<i>Notification of award:</i>	October 2026

For further information on this proposal, the team representative should in the first instance e-mail the lead contact stated above at the e-mail address provided.
