<i>Students must sign NDA:</i>	☐
<i>Project uses personal data:</i>	☐
<i>Custom hardware required:</i>	☐ If Applicable: Please provide details
<i>Relevant research areas (if applicable)¹:</i>	Cyber Security
Project Background Information	
Our research group has developed several (physical/electronic/digital) cyber security games suitable for outreach programmes (from 5-25 year olds). This project is about creating an educational digital game for the age range 15-25 about cyber security. The game would have a variety of modes, but the core mechanic is that the player is presented a number of scenarios, each requiring a decision that affects cyber security. The multi-player mode assigns roles to each player, varying from the state, some organisation, some individual, or some type of attacker. Each players' decisions affect their own and others' security. Your game can fill in any roles with a simple AI, to ensure a game can go ahead with any number of players. In single-player mode, a player can be in any (defensive) role. There is no time constraint on decisions here, so players should be provided background information to help with their decisions. After a run of the game completes, scores are calculated, and your game provides a rundown of how the players' decisions lead to the outcome.	

¹ An overview of different research areas in the school of computer science can be found [here](#).

Requirements	
The game should support networking for multiplayer. To keep the game relevant, it should reference recent events. That means that the game should be built in a way to allows for scenarios to be easily added to the system. The game should look professional, so that teenagers and adolescents are keen to engage with it. The game should have agents that support decision-making from non-AI entities. These should be rule-based and probabilistic. The game must feel like a game, so players must have carefully selected objectives that are realistic, but also improve gameplay and fun.	
Skills	
<i>Highly desirable:</i>	<i>Desirable:</i> Network programming Front-end programming Interest in cyber security
Submission / Award information	
<i>Date of Submission:</i>	September 2026
<i>Date of Pitch:</i>	October 2026
<i>Notification of award:</i>	October 2026

For further information on this proposal, the team representative should in the first instance e-mail the lead contact stated above at the e-mail address provided.
