## Project Background Information

The project aims to design a games companion app to manage and enhance game play for a set of legal education games.

The lead contact has developed a set of games for use in final year undergraduate law seminars on the UoN School of Law's Privacy and Data Protection Law module, which the lead contact convenes. These are intended to introduce games-based learning activities into the module. They are to be used as warm-up exercises at the start of four data protection seminars, exploring the General Data Protection Regulation (GDPR) and its associated debates, and as reflective tools at the end of seminars. Students are encouraged to play the games as group work, then discuss the given and emergent narratives that come from their game play, and end the session by discussing the extent to which their game play experience was consonant or dissonant with the real-world data protection issues discussed in the seminar (the degree of ludo-narrative dissonance). Given narrative describes the in-game lore given alongside the game rules. Emergent narrative describes the stories that develop from player interactions with the rules mechanics (for example dice rolls) or with each other (such as player strategies and in-game behaviours).

<sup>1</sup> An overview of different research areas in the school of computer science can be found [here](#).

The set of games is called 'Agentic'. The given narrative is a homage to 1980s/1990s dystopian sci-fi RPGs, board games, and tabletop games. The lead contact has received advice and feedback on games development from games designers at Warcradle Studios and NordicWeaselGames and will have play tested the games with colleagues and members of Gaming4Good, a Nottingham-based gaming charitable organisation with fundraising aims. Agentic's given narrative is set in the Saturn Data Mining Corp, whose agentic AI 'Olly' is the subject of various hallucinations, malfunctions and malicious actions caused by Luddite saboteurs (cyberpunks), to which functionaries of the SDMC respond.

The four games are adaptations of traditional game mechanics (dice, counters, cards, player choices under uncertainty, game boards, tables of data), which is used to provide space for emergent narrative:

1. 'Questioner' is an adaptation of guess who, to elicit reflections on personal data as data relating to an identifiable person, and with twists to elicit reflections on the individual and market harms of inaccurate data and reflections on probabilistic personal data.
2. 'Seeking Answers' is a 'choose your own adventure' activity with an 'illusion of choice' (i.e. all paths ultimately lead to the final resolution of the adventure), to elicit reflections on the utility (or otherwise) of GDPR transparency requirements and data subject rights.
3. 'System Breach' is a resource management game with random attacks on player characteristics to elicit reflections on real-world data controller responsibilities in advance of, during, and after a data breach.
4. 'Acquisitions' is a map-based strategy card game, in which players may collaborate or compete to collect data points from map locations and may choose to reveal, conceal, or mislead as to their intentions in each round, with prisoners' dilemma dynamics and on-board consequences for their choices. This is intended to elicit reflections on strategic behaviour in relation to international data flows, such as considerations when choosing an international partner, the problem of tragedies of the commons when investing in improved international data flows, and individual and market interests (or not) in lawful behaviour.

The project seeks the design of a games companion app to manage and enhance game play and class discussion, potentially including:

- Streamlining game set up, such as the automation of player datasheets and randomised board deployment;
- Managing player data in game ('book-keeping');
- Tracking player performance across games ('leaderboard');
- Recording game play for review and reflection ('play back');
- Providing post-game reflection points and prompts to support learning;
- Data visualisations to enhance seminar leader review and class discussion;
- Minimising the necessity of games components (dice/counters) and hard copy printing for game play to decrease overall unit costs of the game set;
- Providing rules-support and supplementary materials, such as quick reference, rules searches, and automated rules adjudication;
- Providing additional audio and visual content (including XR/VR) to enhance game play, engagement, and player experience.

Important considerations include balancing these objectives so that engaging and enjoyable game play is not compromised, given and emergent narrative is preserved, and the games remain legal educational games capable of developing soft skills relevant for law students, such as teamwork, rules comprehension and application, strategic use of limited resources, and problem solving.

## Requirements

*The group must provide:*

A finalised companion app for Agentic applying and considering:

- Game management and enhancement features;
- Play testing data (engagement, enjoyment, skills development);
- Product unit cost savings;
- Instructor dashboard and data visualisation tools;
- Privacy policy and terms and conditions;
- Data protection;
- Ethical guidelines;
- User manual.

## Skills

*Highly desirable: Gaming; app development; user experience; data protection; data visualisation.*

*Desirable:*

## Submission / Award information

|                               |                |
|-------------------------------|----------------|
| <i>Date of Submission:</i>    | September 2026 |
| <i>Date of Pitch:</i>         | October 2026   |
| <i>Notification of award:</i> | October 2026   |

For further information on this proposal, the team representative should in the first instance e-mail the lead contact stated above at the e-mail address provided.
