COMP2002 - GRP CV & Example

Dan Marsden (Coordinator)

Katie Bonner (Careers & Employability)

Project Signup Process

- Submission system 1 will open at 9.00 am on Wednesday
 - Only group admins can access
 - Choose an interesting project on a first-come first-served basis
- Submission system 2 will open at 9.00 am on Thursday
- Submission system 3 will open at 9.00 am on Friday

Use of bots will lead to loss of priority in the project selection

Choose Interesting Projects

- Choose projects that the team find interesting
 - Look for consensus where possible
 - If struggling to agree, use the three choices to incorporate views
 - You may not get what you want, so have options
- Do not choose projects to reduce your workload
 - Expectations account for AI usage, team size, challenge,...
 - Looking for ways to minimize your contribution is a good route to low marks

Building a CV for your project and beyond

Katie Bonner: Careers Adviser, Faculty of Science

Your CV is more than a project application

It is about making your experience useful to someone who wasn't there.

Right now:

- Use your experience to make a stronger project application

During the project

- Build new technical, team and client experience

Later:

- Use that evidence for placements, internships and graduate applications

What makes experience relevant?

Imagine a client project needs a student who can:

- Solve technical problems
- Work effectively with others
- Communicate with a client
- Organise their work
- Adapt when things change

Alex, Year 2 Computer Science

Has:

- Programming coursework using Java and Python
- GameJam team software project
- Part-time supermarket job
- Personal coding project
- Part of a sports team

Which experiences could Alex use as evidence?

Make the reader do less work

Candidate A:

Group Software Project

- Worked in a team to develop an application. Used Java and Git Hub

Candidate B:

Group Software Project

- Collaborated in a five-person team to develop a Java application, using GitHub for version control and contributing to debugging and testing ahead of the final demonstration

Strong evidence usually tells us:

Action + Specifics + Purpose + Contribution

What did you **do**? What did you **use**? What **was it for**? What did you **contribute**?

A suggested CV layout

- Name and contact details across the top
- Personal profile
- Education (including projects, modules, technical skills)
- Relevant experience
- Other experience
- Interests or extracurricular activities

Your turn: Build one piece of evidence

Choose **ONE** experience:

- University programming/project work
- Part-time work
- Personal coding project
- Society, sport or volunteering
- Hackathon/Game Jam
- Something else you've done

Use these prompts if you get stuck:

What did I do?

What did I use?

What was it for?

What did I contribute, produce or solve?

Now write ONE CV bullet using:

4 mins. Write, don't just think

Action + Specifics + Purpose + Contribution

60-second code review

If you're sitting with someone, show them your bullet point.

They need to answer:

- 1) Can I understand what you actually did?
- 2) Can I see why it could matter to the person reading my application?

Make one improvement.

Online or on your own?

Apply the same two questions to your own bullet point

Fast forward to the end of the project

What do you want to be able to evidence? **Pick two:**

Technical:

- Developed or implemented...
- Tested, debugged or evaluated...
- Applied a new language, tool or technology...

Client:

- Gathered or clarified requirements...
- Explained technical information...
- Responded to feedback or changing requirements...

Team:

- Co-ordinated work with others...
- Resolved a problem or disagreement...
- Supported the team to meet a deadline...

Project:

- Prioritised competing tasks
- Planned or tracked progress...
- Delivered against a brief...

What would have to happen?

Evidence comes from what you actively do during this project.

e.g., if you picked “I want evidence of project management” then you might actively:

- Volunteer to create a timeline document of the project
- Help the team to decide on realistic deadlines and milestones
- Take the lead on communicating when task deadlines are approaching etc.

Your turn: write down **one** action you could take during the project

Keep the receipts

- Situation – What was happening?
- Contribution – What did **you** actively do?
- Result – What happened / what did it enable?
- Learning – What would you repeat or change?

e.g.,

- Changing client requirements
- Team disagreement
- Technical problem
- Deadline pressure
- Successful delivery

Before you submit your CV

Run five checks.

TARGET: Is this CV clearly written for **this project application**?

EVIDENCE: Have I **shown** my skills rather than simply claimed them?

PRIORITY: Can the reader find my strongest evidence quickly?

CLARITY: Could someone who wasn't there understand what I did?

ACCURACY: Are names, dates, spelling, grammar and formatting correct?
