Education

University of Nottingham, UK

Sep 2026 - Jun 2028 (expected)

BSc Computer Science with Artificial Intelligence (2+2), Jubilee Campus.

University of Nottingham Ningbo China

2024 - 2026

First two years of the 2+2 program; GPA: 4.0/4.0 (Top 10%).

Dean's Scholarship: 2025 - 2026. IELTS: 7.5.

Profile

Computer Science and AI student with experience in model evaluation, stateful AI workflows and Java/Go software development. Interested in applying these skills to a Monte Carlo Tree Search game opponent, with measurable difficulty settings and a clear human-facing interface.

Internship Experience

China Telecom Fufu Information Technology Co., Ltd.

Jul 2026 - Aug 2026

AI Intern | Big Data Applications Division / Data Elements Division

Factory safety AI assistant and agent prototype

- Independently built a Python/Streamlit safety-analysis demo using rules, BGE/ChromaDB retrieval and DeepSeek; generated findings with regulation references and corrective-action priorities.
- Separated analysis services from the UI and used SQLite for traceable task history; handled retrieval and task failures to make the workflow more robust.
- Built a LangGraph plan-and-execute agent prototype with tool routing and state management, gaining experience in coordinating multi-step AI workflows.

Go chaincode testing and Java backend development

- Improved Go chaincode reliability through deterministic record ordering, input validation and regression testing; preserved ledger/API compatibility and automated local Fabric startup and verification with Docker Compose.
- Developed Spring Boot REST APIs using MyBatis/MySQL aggregation and Nacos configuration; checked integration prerequisites and prepared release handoff documentation.

Academic Project

Image Classification System | 2025

- Implemented a modular PyTorch/ResNet18 transfer-learning pipeline covering data preprocessing, model training and evaluation, making experiment components easier to inspect and change.
- Applied data augmentation and compared optimizers to evaluate training choices; organized the workflow around repeatable experiments rather than an isolated model demonstration.
- Built a Flask REST inference service and containerized the service with Docker, separating model execution from the application interface for reproducible deployment.

Technical Skills

Programming: Java, Python, Go, C/C++, SQL, Shell, MATLAB.

AI & data: PyTorch, transfer learning, model evaluation, LangGraph/LangChain, RAG, BGE, ChromaDB, Pandas, SQLite.

Engineering: JUnit, Go testing, Git, Docker Compose, WSL/Linux, Spring Boot, Flask, Streamlit, REST APIs; regression tests and integration documentation.
