Experience

China Telecom Fufu Information Technology Co., Ltd.

Jul–Aug 2026

Software Engineering Intern

- Built a factory-safety AI assistant with deterministic rules, Chinese RAG over internal regulations, and DeepSeek LLM synthesis; added offline fallback, source traceability, and multi-file processing for XLSX/CSV/TXT/DOCX/PDF.
- Developed 4 REST endpoints for a medical-health portal in an existing Spring Boot microservice, implementing MyBatis/MySQL KPI aggregation, Nacos-driven configuration, news/image fallback, and 11 passing unit tests.
- Rebuilt and validated a 4-organization Hyperledger Fabric platform in WSL/Docker; automated tests across Portal, Gateway, Nacos, MySQL, Redis, Orderer, Peers, and chaincodes.
- Fixed 10 failing cases in a Go evidence chaincode through deterministic ordering, dataId/recordId certificate compatibility, and Unicode-safe 999/1000-character validation; preserved ledger/API compatibility and added regression tests.
- Prototyped a LangGraph plan-and-execute agent, documented positive/negative acceptance paths for a 10-rule trusted-data compliance demo, and prepared risk-based OpenSandbox runtime profiles for runc, crun, gVisor, and Kata.

Selected Project

Image Classification System

2025

PyTorch, Transfer Learning, Flask, Docker

- Developed a ResNet18 transfer-learning pipeline with modular data, training, evaluation, and REST inference components.
- Implemented data augmentation and optimizer comparison, then containerized the Flask inference service with Docker.
