

Call for Expressions of Interest

<i>Date of Issue:</i>	September 2026
<i>Expected Completion Date:</i>	May 2027
<i>Project Title:</i>	Credit Card Recommender & Application simulator
<i>Company:</i>	Capital One

Contact Details

<i>Lead Contact:</i>	Omar Afzal
<i>Lead E-mail:</i>	omar.afzal@capitalone.com
<i>Additional Contact:</i>	Ramat Abdulazeez
<i>E-mail:</i>	ramotalai.abdulazeez@capitalone.com
<i>Additional Contact:</i>	Ellie Wordsworth
<i>E-mail:</i>	ellie.wordsworth@capitalone.com
<i>Additional Contact:</i>	Qurratul Rabbi
<i>E-mail:</i>	qurratul.rabbi@capitalone.com

Additional Info

<i>Students must sign NDA:</i>	N
<i>Project uses personal data:</i>	N
<i>Custom hardware required:</i>	N <i>If Applicable: n/a</i>
<i>Relevant research areas (if applicable)¹:</i>	AI, Recommender systems and rule engines

Project Background Information

Customers seek out credit cards for a wide variety of reasons—whether it's to build their credit score, earn rewards on daily spending, finance a large purchase, or consolidate existing debt. However, the financial marketplace is crowded and often overwhelming. Customers are not always sure which credit card is best suited to their specific lifestyle, financial situation, and goals.

At Capital One, we want to empower customers by guiding them toward the financial products that best fit their bespoke needs, ensuring they get the most value out of their credit card.

The aim of this project is to build a web or mobile application that uses AI to act as an intelligent credit card recommender system. The application should guide customers through an intuitive experience (such as a questionnaire or conversational interface) to understand their financial needs and profile. Based on this user input, the system must filter through a predefined list of credit card products and recommend the optimal card (or top choices) for that specific customer, explaining *why* it is a good match.

¹ An overview of different research areas in the school of computer science can be found [here](#).

Requirements	
<i>The group must provide:</i> A working prototype of an application that: • Captures User Inputs: An intuitive questionnaire or form where users enter their card preferences and goals for a credit card. • Delivers Recommendations: Matching logic that selects the best credit card(s) from a set list and briefly explains why it fits their needs. • Displays Eligibility: Simple logic that calculates and displays the user's estimated likelihood of approval (e.g., High, Medium, or Low) for recommended cards. Students should evaluate the models that they create to recommend and check eligibility based on appropriate metrics (such as accuracy and precision). Students should test their application and consider the user's experience when navigating it.	
Skills	
Highly desirable: • UX & UI Design: A basic understanding of user-centered design and simple wireframing. • Development experience with differing web and mobile technologies • Experience with unit testing and an understanding of other testing (i.e. functional/ end-to-end testing)	Desirable: • Experience with a recognised Software development methodology (scrum, agile, kanban etc.) • An understanding of the software development lifecycle
Submission / Award information	
<i>Date of Submission:</i>	September 2026
<i>Date of Pitch:</i>	October 2026
<i>Notification of award:</i>	October 2026

For further information on this proposal, the team representative should in the first instance e-mail the lead contact stated above at the e-mail address provided.
