Project Background Information

About MishMash Productions

MishMash Productions is a registered charity and Arts Council England National Portfolio Organisation that creates accessible and engaging classical music experiences for modern audiences. The organisation tours productions across the UK, performing in theatres, concert halls, libraries, community venues and schools. A typical touring company consists of up to four musicians and a Company Stage Manager.

The Challenge

MishMash currently uses large online spreadsheets to manage tour schedules, travel arrangements and logistics. Although the spreadsheets contain all the necessary information, they are difficult to use on mobile phones, hard to navigate whilst travelling and time consuming to update. The organisation is looking for a more user-friendly solution.

Project Goal

Design a mobile friendly app that allows touring company members to access

¹ An overview of different research areas in the school of computer science can be found [here](#).

the information they need whilst on the road, giving producers and tour managers full oversight of the entire tour.

User Requirements

Each tour member should be able to:

- View their personal daily schedule
- Access venue information and addresses
- View accommodation details
- Access travel plans and train times
- Open map links directly
- View train tickets and travel documents (PDFs)
- Access booking references and important notes
- Quickly see what is happening each day

Admin Requirements

Producers and tour managers should be able to:

- Create and edit schedules from a desktop computer
- View information for the entire touring company
- Update tour information quickly and easily
- Upload files, PDFs and links
- Back up information securely
- Make notes or reminders to add missing details or update sections of information.
- Create personalised schedules for individual performers

Current Spreadsheet System

Here is an example of a tour spreadsheet from our 2026 production Ruby's Worry. [Ruby's worry Tour for App Project.xlsx](#)

The existing tour spreadsheet contains two main sections:

1. Simple Schedule

A quick overview of the tour showing:

- Dates
- Venues
- Addresses
- Performance times
- Get-in times

This provides an easy-to-read summary of each day.

2. Full Schedule

A detailed planning document containing:

Shared Information

- Activity and event details
- Dates and times
- Get-in times
- Venue information
- Accommodation details
- Parking information
- Booking references

Individual Information

Each performer has a unique schedule because they travel from different home locations. This means each person may have different:

- Travel arrangements
- Train journeys
- Accommodation requirements
- Ticket links
- Arrival times

For example, performers may be travelling from locations such as Glasgow, Sheffield, London, Nottingham or High Wycombe.

Requirements

Key Requirement

An important feature is personalised access.

Producers and managers need to see the complete tour schedule and logistics.

Performers should only see information relevant to them, including their own travel plans, accommodation details, tickets and daily schedule.

Required Features

The app should support:

- Daily schedules
- Venue details and addresses
- Performance times
- Get-in times
- Accommodation information
- Travel plans
- Train times
- PDF train tickets
- Booking references
- Parking information
- Contact details
- Map links

- Notes and updates

Why This Is Needed

The example Ruby's Worry tour demonstrates the complexity of managing a touring production. A single tour can include:

- Multiple weeks on the road
- Dozens of venues across the UK
- Different travel arrangements for each performer
- Hotels, Airbnbs and theatre accommodation
- Hundreds of travel movements
- Numerous train tickets and booking references
- Venue-specific parking, access and operational information

Managing this information through spreadsheets is difficult, particularly on mobile devices.

Existing Solutions Tested

MishMash trialled Wanderlog but found several limitations:

- Designed primarily for holidays and leisure travel
- Difficult to personalise for individual users
- Time-consuming to update
- Requires an expensive subscription for full functionality
- Not well suited to touring companies where performers start from different locations

You can find a link to our Wanderlog tour here:

<https://wanderlog.com/view/mfacmntzhn/fishing-for-haiku-june-tour/shared>

To be clear, this isn't an ideal solution so don't spend too much time copying things from here, but we thought it'd be potentially useful to see what's currently out there and to see the limitations.

Success Criteria

The ideal solution will:

- Be easy to use on a mobile phone
- Allow performers to view personalised schedules
- Give producers complete oversight of the entire tour
- Provide quick access to tickets, maps and booking information
- Be simple to update and maintain
- Work better than spreadsheets
- Be open source and scalable for future tours

Summary

MishMash Productions needs a mobile-first tour management app that allows producers to manage an entire tour whilst giving each performer a personalised view of their own schedule, travel plans, accommodation details, documents and key information.
