

Call for Expressions of Interest

<i>Date of Issue:</i>	September 2026
<i>Expected Completion Date:</i>	May 2027
<i>Project Title:</i>	Tile Takeover
<i>Company:</i>	UNiDAYS

Contact Details

<i>Lead Contact:</i>	Joshua Richardson
<i>Lead E-mail:</i>	joshua.richardson@myunidays.com
<i>Additional Contact:</i>	Jodi Swift
<i>E-mail:</i>	jodi.swift@myunidays.com
<i>Additional Contact:</i>	
<i>E-mail:</i>	

Additional Info

<i>Students must sign NDA:</i>	No
<i>Project uses personal data:</i>	No
<i>Custom hardware required:</i>	No If Applicable: N/A
<i>Relevant research areas (if applicable)¹:</i>	N/A

Project Background Information

UNiDAYS is a part of the university experience for tens of millions of students worldwide. We're best known for helping students save money on their purchases. Our mission is simple - to make every student experience more valuable and rewarding.

One of the first major challenges students face when moving to a new university is making new friends as they get used to being away from home, for some this will be the first time they have been away for a long time. It can also be daunting moving to a new city, in unfamiliar surroundings.

We would like you to create a location based, live action game, the next big thing, a social phenomenon. A city wide, tile capturing extravaganza that brings students together, encouraging them to get out and about exploring their city, capturing tiles as they go!

¹ An overview of different research areas in the school of computer science can be found [here](#).

Requirements	
<i>The group must provide:</i> By the end of the project the group should have developed a web/app contested territory game experience using tiled maps where teams go head to head with each other to win tiles. The team with the most captured tiles wins. We want to give you the flexibility to define the specific tile capturing mechanics, however there are some key requirements that should be considered when creating this application. <u>Requirements</u> Game modes • Custom games - user created groups, which only permit friends to join. • Fixed teams - predefined groups that users can join e.g. Universities (NTU vs Trent), clubs and societies. Real time • The game should take place in real time in physical locations • Users should see real time updates as tiles are captured History • As games take place over time and tiles are captured, there should be a way to replay the changes that took place quickly Leaderboards • Show each team and their score <u>Key considerations</u> • Specific rules - e.g. tiles capture and scoring mechanics • How to keep history of the game and enable it to be replayed visually • How to split up the map into capturable sections • Supporting as many mobile devices as possible • Implementation of custom games (user created groups)	
Skills	
<i>Highly desirable:</i> • <i>Web/app development experience, or a desire to learn</i> • <i>Backend systems development, or a desire to learn</i> • <i>Real time application development, or a desire to learn</i> • <i>Communication and collaboration</i>	<i>Desirable:</i> • <i>Databases and data structures</i> • <i>Strong interest in Design (UI/UX)</i> • <i>Game development</i>

Commented [1]: By replayed visually, do you mean a literal replay for their game play?

Commented [2]: I don't know if you are familiar with the game Civilisation, but at the end you get a visual map played at super speed of how the game unfolded.
Here's a gif that is what I would like to say in pictures:
<https://i.redd.it/ggcxbvchbf951.gif>

Commented [3]: Ooh that looks cool!

Submission / Award information	
<i>Date of Submission:</i>	September 2026
<i>Date of Pitch:</i>	October 2026
<i>Notification of award:</i>	October 2026

For further information on this proposal, the team representative should in the first instance e-mail the lead contact stated above at the e-mail address provided.
