Additional Info	
<i>Students must sign NDA:</i>	☐
<i>Project uses personal data:</i>	☐
<i>Custom hardware required:</i>	☐ If Applicable: Please provide details
<i>Relevant research areas (if applicable)¹:</i>	Game Theory, Artificial Intelligence
Project Background Information	
Games are often used as test problems for new AI ideas because they are easy to implement, the rules are known by everybody, and the decision making involved in trying to win the game requires high levels of intelligence. The aim of this project is to implement a well-known game and an AI player to play one-on-one against a human opponent.	

¹ An overview of different research areas in the school of computer science can be found [here](#).

Requirements	
<i>The group must provide:</i> 1. An implementation of a game of suitable complexity. 2. An implementation of a Monte Carlo Tree Search AI opponent, including user-selectable ability levels. 3. An easy to use and attractive GUI for the human to play the game against the AI. 4. Software Engineering Design documentation 5. A user manual	
Skills	
<i>Highly desirable:</i> Programming ability in a popular general-purpose programming language e.g. C/C++/C# or Java. Team working skills	<i>Desirable:</i> Interest in Games and Artificial Intelligence
Submission / Award information	
<i>Date of Submission:</i>	September 2026
<i>Date of Pitch:</i>	October 2026
<i>Notification of award:</i>	October 2026

For further information on this proposal, the team representative should in the first instance e-mail the lead contact stated above at the e-mail address provided.
